Set up your billing account for a Microsoft Customer Agreement

If your direct Enterprise Agreement enrollment expired or about to expire, you can sign a Microsoft Customer Agreement (MCA) to renew your enrollment. This article describes the changes to your existing billing after the setup and walks you through the setup of your new billing account. Currently, expiring indirect Enterprise Agreements can't get renewed with a Microsoft Customer Agreement.

The renewal includes the following steps:

1. Accept the new Microsoft Customer Agreement. Work with your Microsoft field representative to understand the details and accept the new agreement.
2. Set up the new billing account that gets created for the new Microsoft Customer Agreement.

To set up the billing account, you must transition the billing of Azure subscriptions from your Enterprise Agreement enrollment to the new account. The setup doesn't affect Azure services that are running in your subscriptions. However, it changes the way you manage the billing for your subscriptions.

- You manage your Azure services and billing in the Azure portal .
- You get a monthly, digital invoice for your charges. You can view and analyze the invoice in the Cost Management + Billing page.
- You use the billing structure and scopes from the new account to manage and organize your billing instead of departments and account in your Enterprise Agreement enrollment.

Before you start the setup, we recommend you do the following actions:

- Before you transition to the Microsoft Customer Agreement, **delete users that don't need access to the new billing account**.
  - Deleting users simplifies the transition and improves the security of your new billing account.
- **Understand your new billing account**
  - Your new account simplifies billing for your organization. Get a quick overview of your new billing account
- **Verify your access to complete the setup**
  - Only users with certain administrative permissions can complete the setup. Check if you have the access required to complete the setup.
- **Understand changes to your billing hierarchy**

    - Your new billing account is organized differently than your Enterprise Agreement enrollment. Understand changes to your billing hierarchy in the new account.
- **Understand changes to your billing administrators' access**
    - Administrators from your Enterprise Agreement enrollment get access to the billing scopes in the new account.Understand changes to their access.
- **View Enterprise Agreement features replaced by the new account**
    - View features of the Enterprise Agreement enrollment replaced by features in the new account.
- **View answers to most common questions**
    - View additional information to learn more about the setup.

Access required to complete the setup

To complete the setup, you need both of these roles:

- Owner of the billing account that was created when the Microsoft Customer Agreement was signed. To learn more about billing accounts, see Your billing account.
- Enterprise administrator on the enrollment that is renewed.

Start migration and get permission needed to complete setup

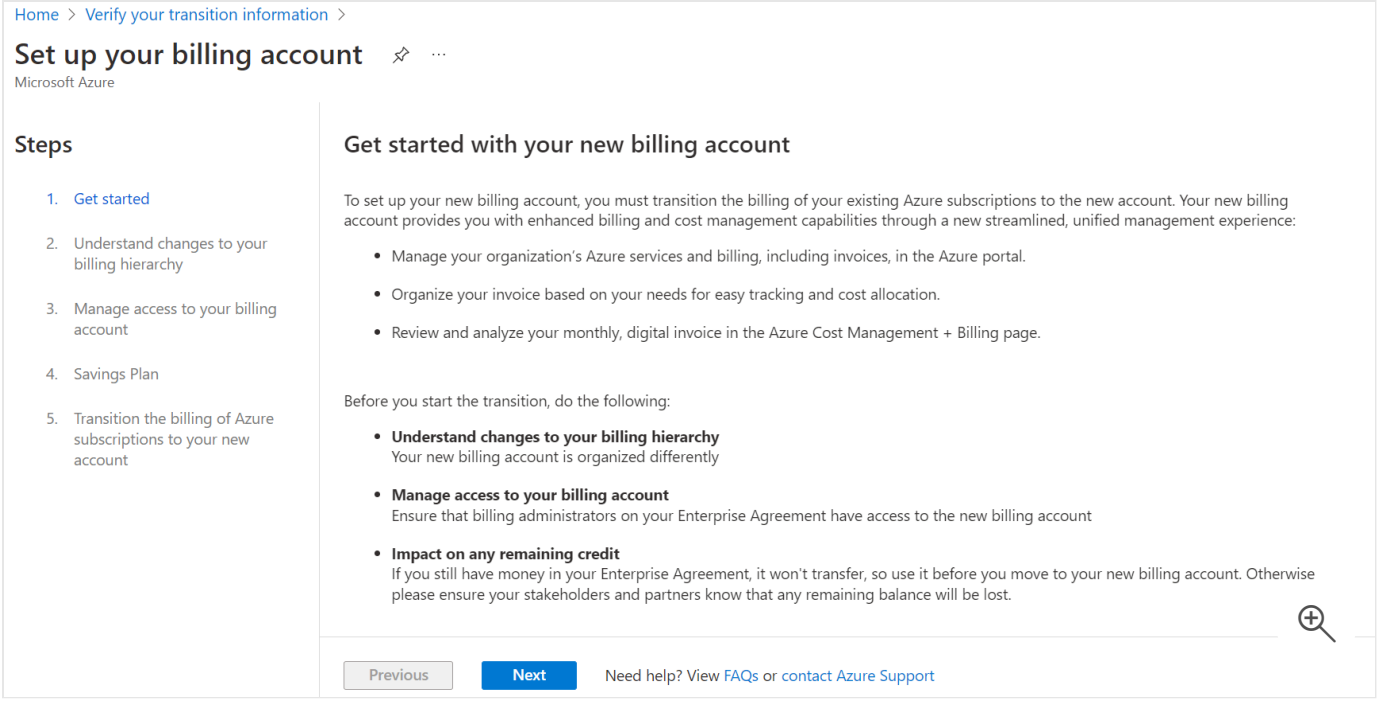

You can use the following options to start the migration experience for your EA enrollment to your Microsoft Customer Agreement.

- Sign in to the Azure portal using the link in the email that was sent to you when you signed the Microsoft Customer Agreement.
- If you don't have the email, sign in using the following link.

```
https://portal.azure.com/#blade/Microsoft_Azure_SubscriptionManagement/TransitionEnrollment
```

If you have both the enterprise administrator and billing account owner roles, you see the following page in the Azure portal. You can continue setting up your EA enrollments and Microsoft Customer Agreement billing account for transition.

Here's an example screenshot showing the Get started experience. We cover each of the steps in more detail later in this article.

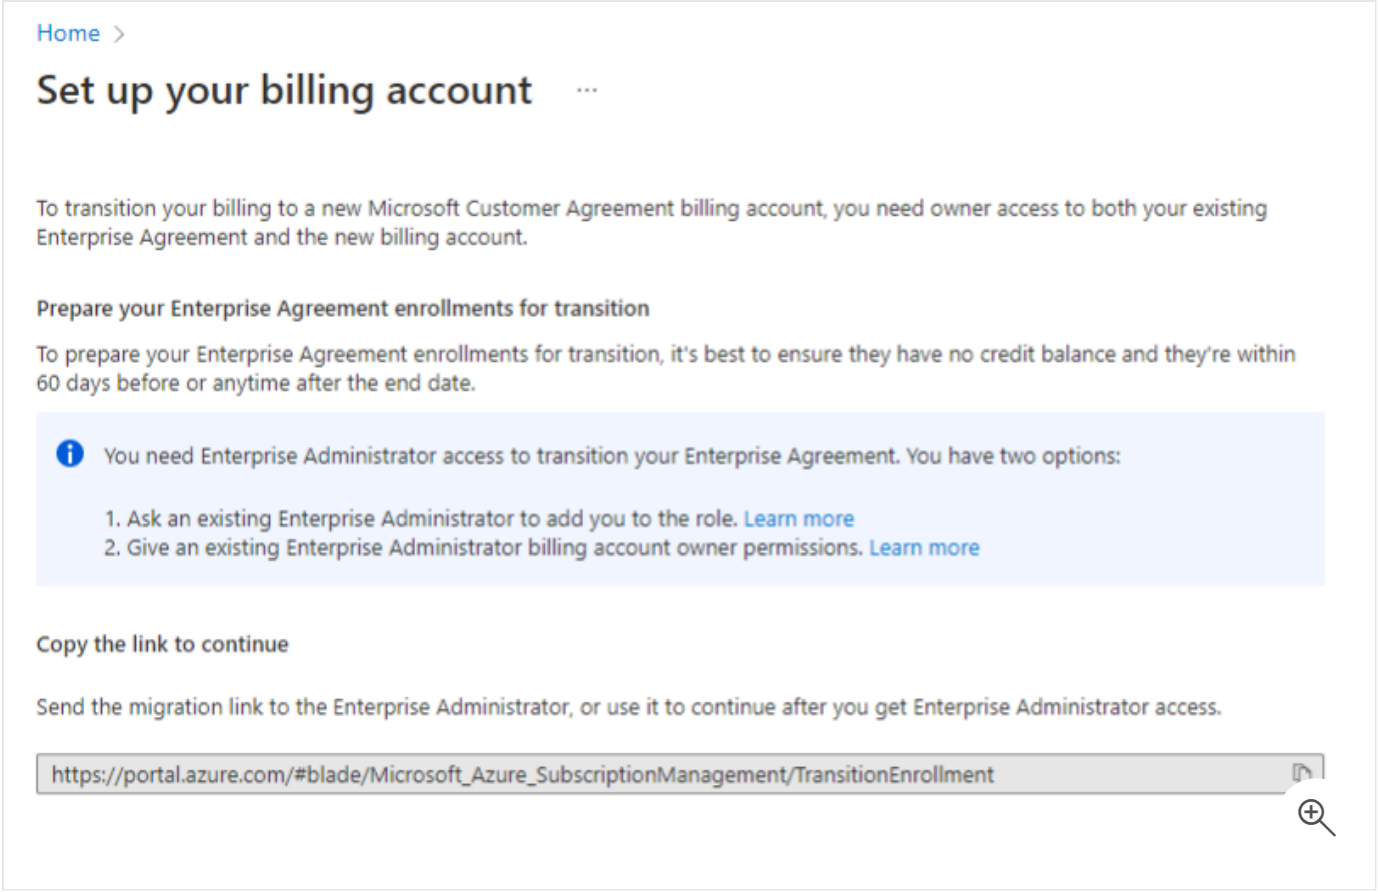

If you don't have the enterprise administrator role for the enterprise agreement or the billing account owner role for the Microsoft Customer Agreement, then use the following information to get the access that you need to complete setup.

> **Note**
>
> The Global Administrator role is above the Billing Account Administrator. Global Administrators in a Microsoft Entra ID tenant can add or remove themselves as Billing Account Administrators at any time to the Microsoft Customer Agreement. For more information about elevating access, see Elevate access to manage billing accounts.

If you're not an enterprise administrator on the enrollment

You see the following page in the Azure portal if you have a billing account owner role but you're not an enterprise administrator.

You have two options:

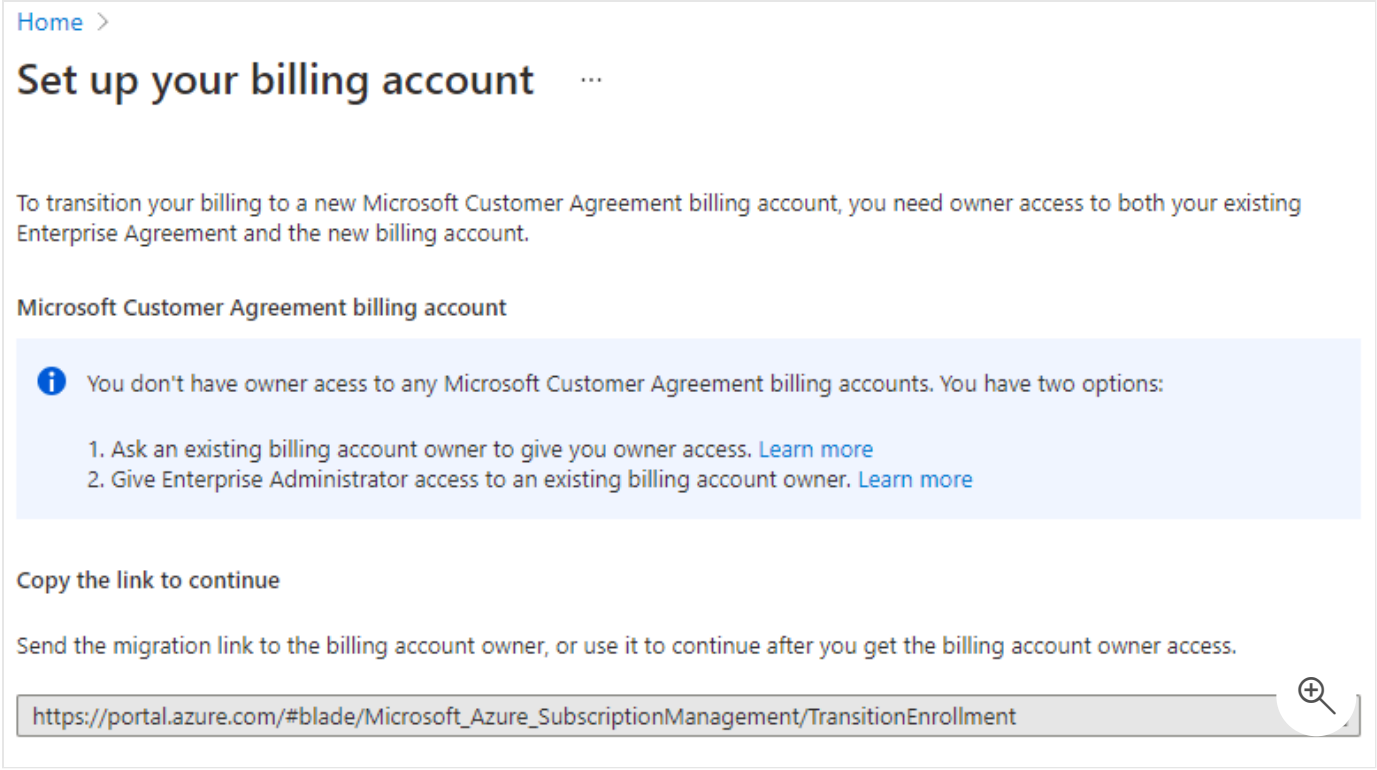

- Ask the enterprise administrator of the enrollment to give you the enterprise administrator role. For more information, see Add another enterprise administrator.
- Give an enterprise administrator the billing account owner role. For more information, see Manage billing roles in the Azure portal.

If you're given the enterprise administrator role, copy the migration link. Open it in your web browser to continue setting up your Microsoft Customer Agreement. Otherwise, send it to the enterprise administrator.

If you're not an owner of the billing account

If you're an enterprise administrator but you don't have a billing account, you see the following error in the Azure portal. It prevents the transition.

If you have billing account owner access to the correct Microsoft Customer Agreement and you see the following message, make sure that you are in the correct tenant for your organization. You might need to change directories.

You have two options:

- Ask an existing billing account owner to give you the billing account owner role. For more information, see Manage billing roles in the Azure portal.
- Give the enterprise administrator role to an existing billing account owner. For more information, see Add another enterprise administrator.

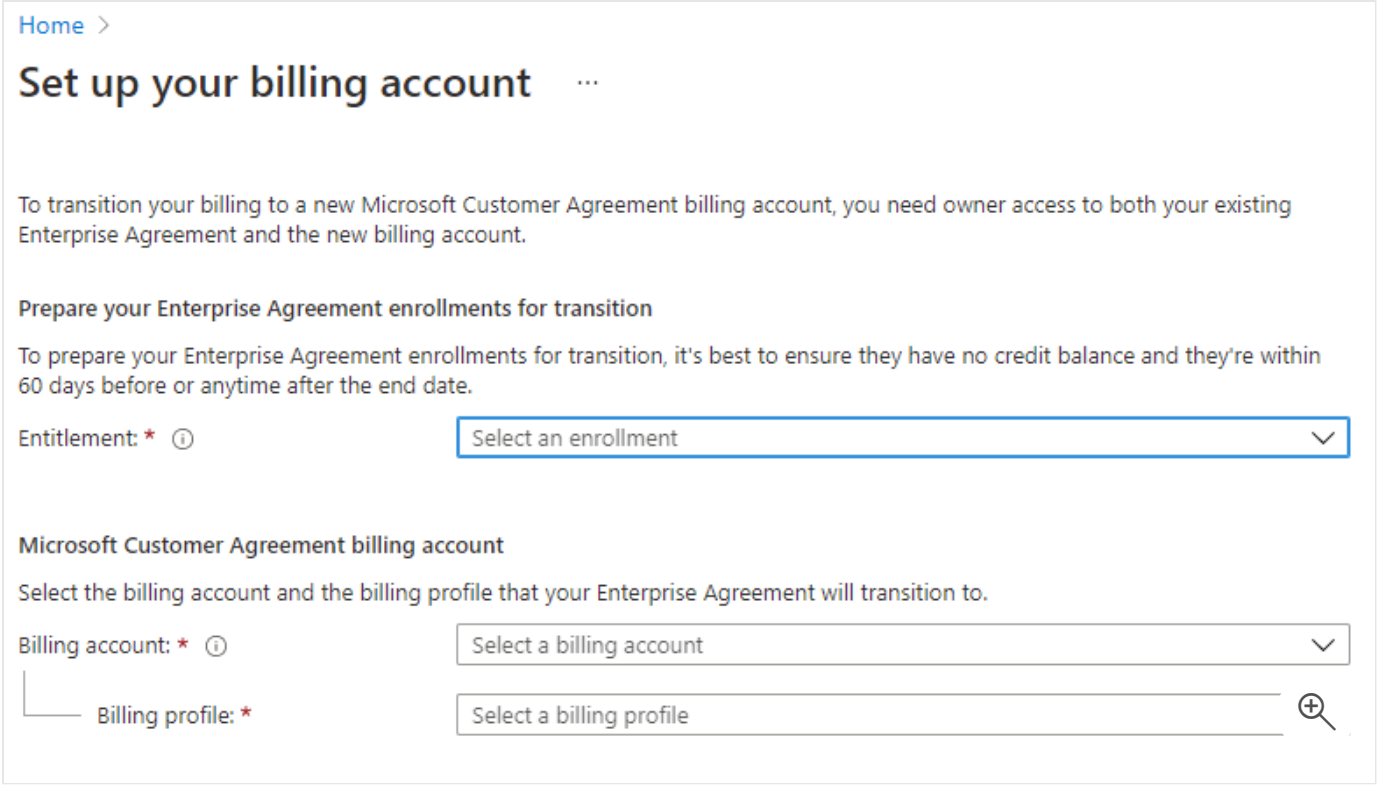

If you're given the billing account owner role, copy the migration link. Open it in your web browser to continue setting up your Microsoft Customer Agreement. Otherwise, send the link to the billing account owner.

Prepare enrollment for transition

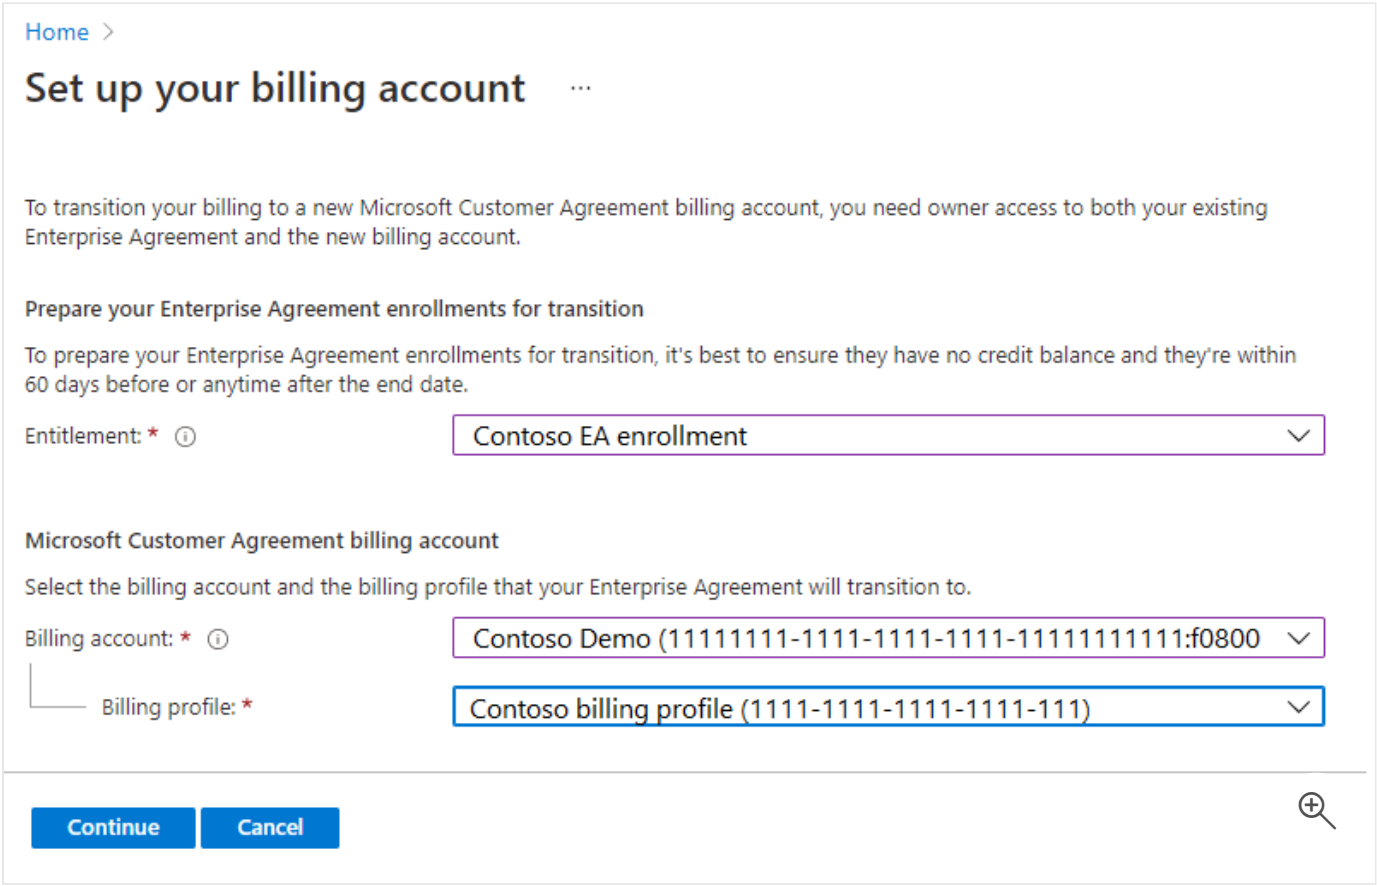

After you have owner access to both your EA enrollment and billing account, you prepare them for transition.

Open the migration that you were presented previously, or open the link that you were sent in email. The link is `https://portal.azure.com/#blade/Microsoft_Azure_SubscriptionManagement/TransitionEnrollment`.

The following image shows and example of the Prepare your enterprise agreement enrollments for transition window.

Next, select the source enrollment to transition. Then select the billing account. If validation passes without any problems similar to the following screen, select **Continue** to proceed.

Error conditions

If you have the Enterprise Administrator (read-only) role, you see the following error that prevents the transition. You must have the Enterprise Administrator role before you can transition your enrollment.

```
Select another enrollment. You do not have Enterprise Administrator write permission to the enrollment.
```

If your enrollment has more than 60 days until its end date, you see the following error that prevents the transition. The current date must be within 60 of the enrollment end date before you can transition your enrollment.

```
Select another enrollment. This enrollment has more than 60 days before its end date.
```

If your enrollment still has credits, you see the following error that prevents the transition. You must use all of your credits before you can transition your enrollment.

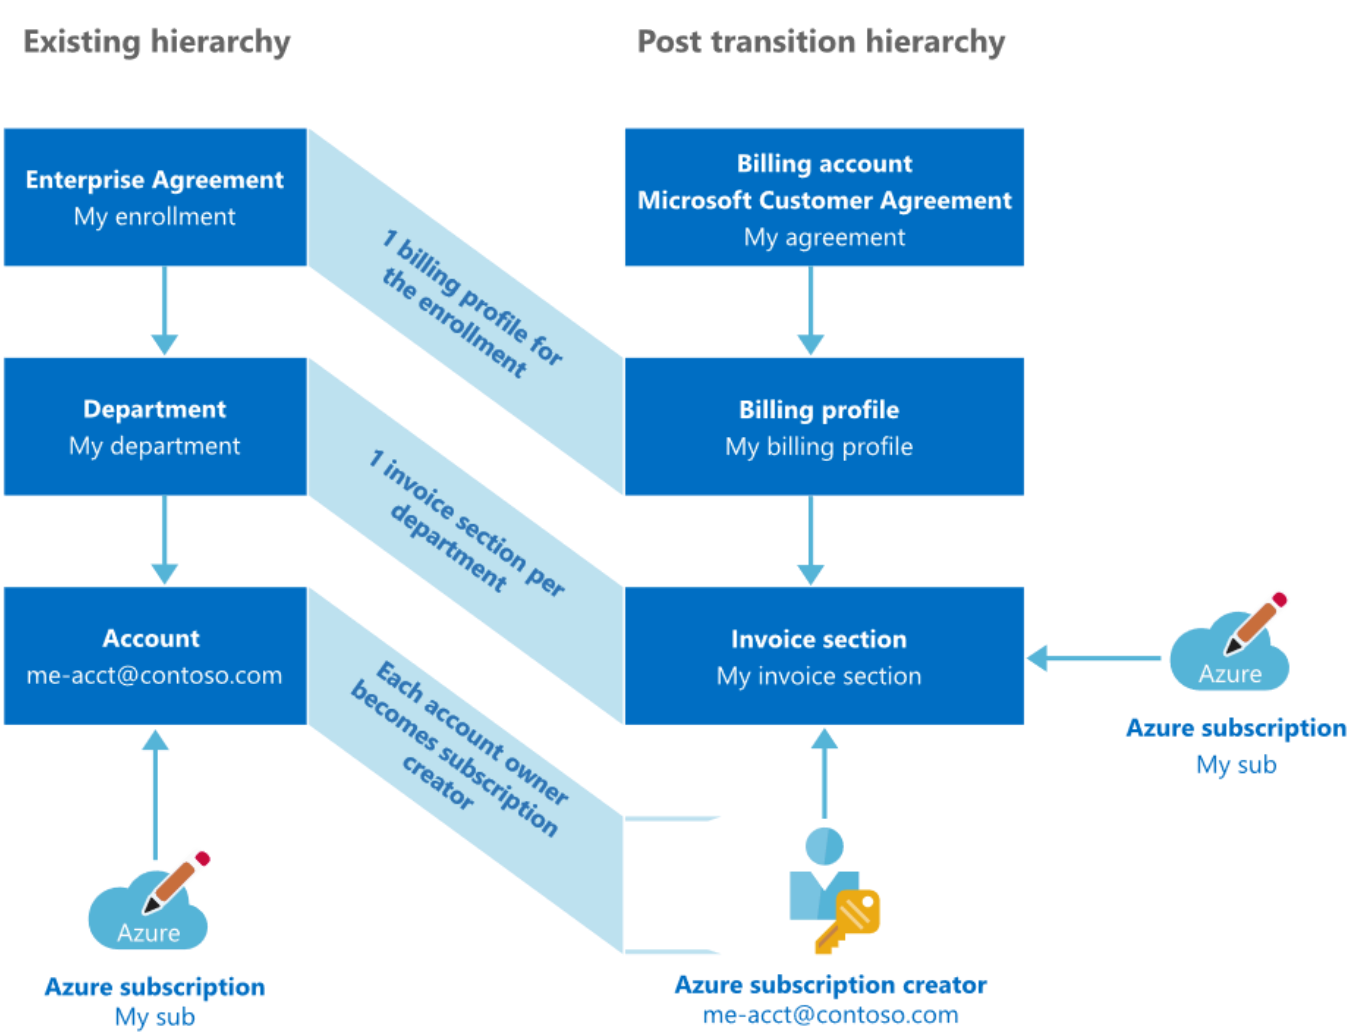

```
Select another enrollment. This enrollment still has credits and can't be transitioned to a billing account.
```

If your new billing profile doesn't have the new plan enabled, you see the following error. You must enable the plan before you can transition your enrollment. Contact your Microsoft representative for assistance.

```
Select another Billing Profile. The current selection does not have Azure Plan and Azure dev test plan enabled on it.
```

Understand changes to your billing hierarchy

Your new billing account simplifies billing for your organization and provides enhanced billing and cost management capabilities. The following diagram explains how billing is organized in the new billing account.

1. You use the billing account to manage billing for your Microsoft customer agreement. Enterprise administrators become owners of the billing account. To learn more about billing account, see understand billing account.
2. You use the billing profile to manage billing for your organization, similar to your Enterprise Agreement enrollment. Enterprise administrators become owners of the billing profile. To learn more about billing profiles, see understand billing profiles.
3. You use an invoice section to organize your costs based on your needs, similar to departments in your Enterprise Agreement enrollment. Department becomes invoice sections and department administrators become owners of the respective invoice sections. To learn more about invoice sections, see understand invoice sections.
4. The accounts that were created in your Enterprise Agreement aren't supported in the new billing account. The account's subscriptions belong to the respective invoice section for their department. Account owners can create and manage subscriptions for their invoice sections.

> **Note**
>
> When you have SQL Server licenses applied with centrally managed SQL Azure Hybrid Benefit in your Enterprise Agreement and then transfer the agreement to a Microsoft Customer Agreement (enterprise), the licenses don’t automatically transfer. After your new

agreement migration completes, you must manually assign licenses with centrally managed SQL Hybrid Benefit. For more information about planning and getting started, see **Transition to centrally managed Azure Hybrid Benefit**. For more information about centrally managed Azure Hybrid Benefit, see **What is centrally managed Azure Hybrid Benefit for SQL Server**.

Changes to billing administrator access

Depending on their access, billing administrators on your Enterprise Agreement enrollment get access to the billing scopes on the new account. The following lists explain the changes to access that result from setup:

Enterprise administrator

Gets the following roles after transition:

- Billing account owner
  - Can manage everything on the billing account
- Billing profile owner
  - Can manage everything on the billing profile
  - Invoice section owner on all invoice sections
  - Can manage everything on the invoice sections

Enterprise administrator (Read only)

Gets the following roles after transition:

- Billing account reader
  - Gets a read-only view of everything on billing account
- Billing profile reader
  - Gets a read-only view of everything on billing profile
- Invoice section reader on all invoice section
  - Gets a read-only view of everything on the invoice sections

Department administrator

Gets the following roles after transition:

- Invoice section owner on the invoice section created for their respective department
  - Can manage everything on the invoice section

Department administrator (Read only)

Gets the following role after transition:

- Invoice section reader on the invoice section created for their respective department
  - Gets a read-only view of everything on the invoice section

Account owner

Gets the following role after transition:

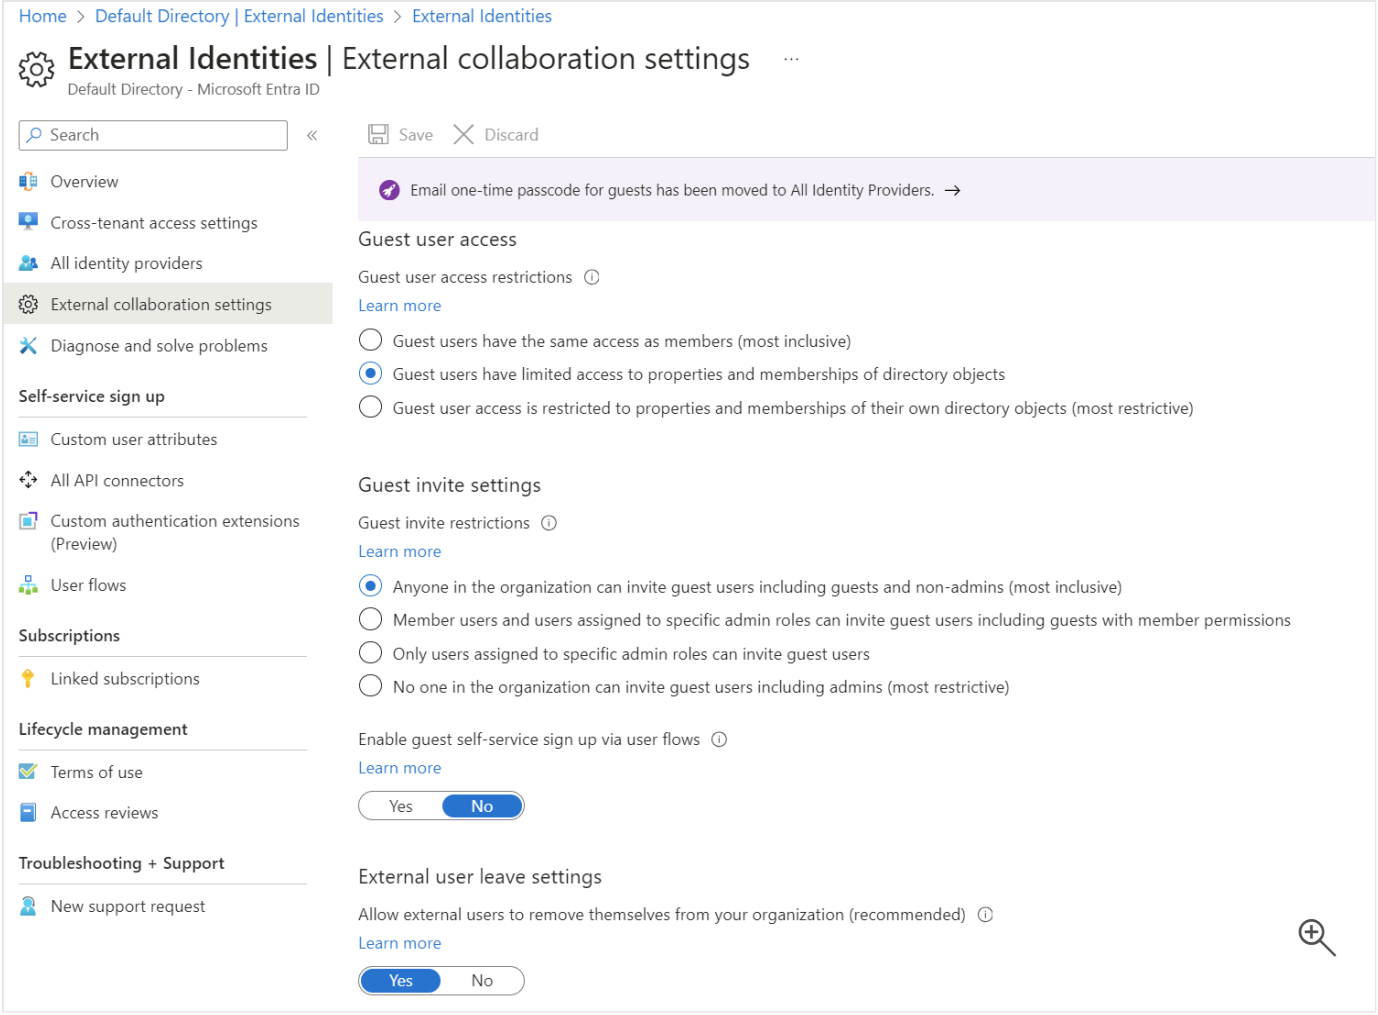

- Azure subscription creator on the invoice section created for their respective department
  - Can create Azure subscriptions for their invoice section

A Microsoft Entra tenant is selected for the new billing account while accepting your Microsoft Customer Agreement. If a tenant doesn't exist for your organization, a new tenant is created. The tenant represents your organization within Microsoft Entra ID. Global tenant administrators in your organization use the tenant to manage access of applications and data in your organization.

Your new account only supports users from the tenant that was selected while signing the Microsoft Customer Agreement. If users with administrative permission on your Enterprise Agreement are part of the tenant, they get access to the new billing account during the setup. If they're not part of the tenant, they can't access the new billing account unless you invite them.

When you invite the users, they're added to the tenant as guest users and get access to the billing account. To invite the users, guest access must be turned on for the tenant. For more information, about enabling guest access see control guest access in Microsoft Entra ID. If the guest access is turned off, contact the global administrators of your tenant to turn it on.

As mentioned previously, to send invitations, you must first enable guest access on the tenant using Microsoft Entra ID.

Otherwise, you see an error message saying:

```
Invitations couldn't be sent. Guest access must be enabled on the tenant to invite users. Contact the global administrators of your tenant to enable guest access. When guest access is enabled, you can come back to this page by click the URL we sent you in email.
```

View replaced features

The following Enterprise Agreement's features are replaced with new features in the billing account for a Microsoft Customer Agreement.

Cost Management Power BI template app

When you convert an EA enrollment to MCA, you can't use the Cost Management Power BI template app any longer because the app doesn't support MCA. However, the Cost Management connector for Power BI Desktop supports MCA accounts.

Enterprise Agreement accounts

The accounts that were created in your Enterprise Agreement enrollment aren't supported in the new billing account. The account's subscriptions belong to the invoice section created for their

respective department. Account owners become Azure subscription creators and can create and manage subscriptions for their invoice sections.

Notification contacts

Notification contacts are sent email communications about the Azure Enterprise Agreement. They aren't supported in the new billing account. Emails about Azure credits and invoices are sent to users who have access to billing profiles in your billing account.

Spending quotas

Spending quotas that were set for departments in your Enterprise Agreement enrollment are replaced with budgets in the new billing account. A budget is created for each spending quota set on departments in your enrollment. For more information on budgets, see Tutorial: Create and manage budgets.

Cost centers

Cost center that were set on the Azure subscriptions in your Enterprise Agreement enrollment are carried over in the new billing account. However, cost centers for departments and Enterprise Agreement accounts aren't supported.

Additional information

The following sections provide additional information about setting up your billing account.

No service downtime

Azure services in your subscription keep running without any interruption. We only transition the billing relationship for your Azure subscriptions. There are no changes to existing resources, resource groups, or management groups.

User access to Azure resources

Access to Azure resources that was set using Azure role-based access control (Azure RBAC) isn't affected during the transition.

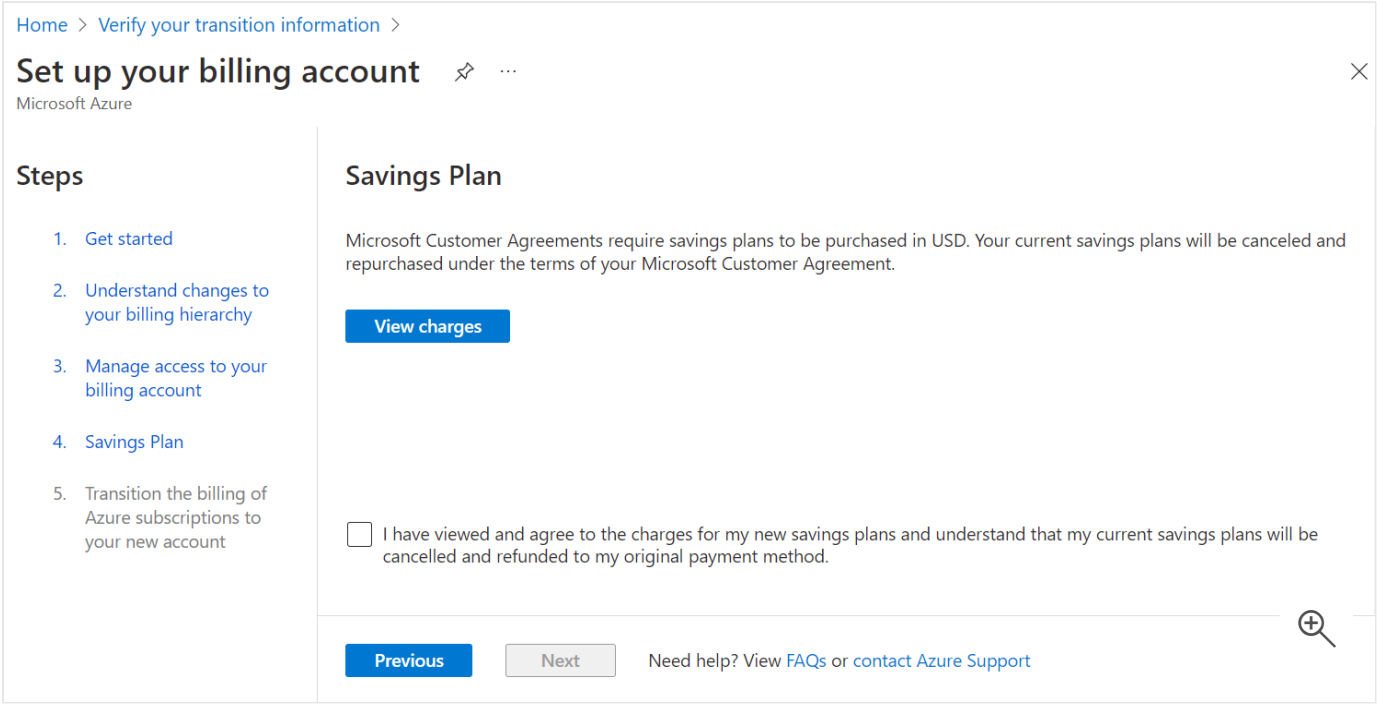

Azure reservations and savings plans

Any Azure reservations and savings plan in your Enterprise Agreement enrollment are moved to your new billing account. During the transition, there are no changes to the reservation discounts that are being applied to your subscriptions. If you have a savings plan that's getting transferred

and it was purchased in USD, there are no changes to the saving plan discounts. For more details, refer to the **Changes after migration** section below.

Savings plan transfers with a non-USD billing currency

You see the following image when your Enterprise Agreement enrollment savings plan wasn't purchased in USD.

> **Note**
>
> - If your enrollment is non USD currency, any Azure Savings Plans purchased will not be transferred to the destination billing account. The Savings Plans will be cancelled in the source enrollment and automatically repurchased in the destination billing account. Note the following:
>   - Each newly purchase Savings Plan will be billed Monthly, regardless of the billing frequency of the Savings Plan it is replacing.
>   - Each newly purchased Savings Plan will be priced as the USD equivalent of the original Savings Plan. For example, assuming a €1: $1.17 rate, a €5/hour Savings Plan would be replaced with a $5.85/hour Savings Plan.
>   - Each newly purchased Savings Plans will have a 1-year term, regardless of the term of the Savings Plan it is replacing. As a result, each new Savings Plan will have a different term end date when compared to the Savings Plan being replaced.
>   - If the original Savings Plan has a 1-year term, the new 1-year Savings Plan will provide identical savings benefits. If you are going from 3-year to 1-year Savings Plans, expect reduced savings benefits due to the discount differences between the terms. To maintain your previous savings level, you should buy an additional 1- year

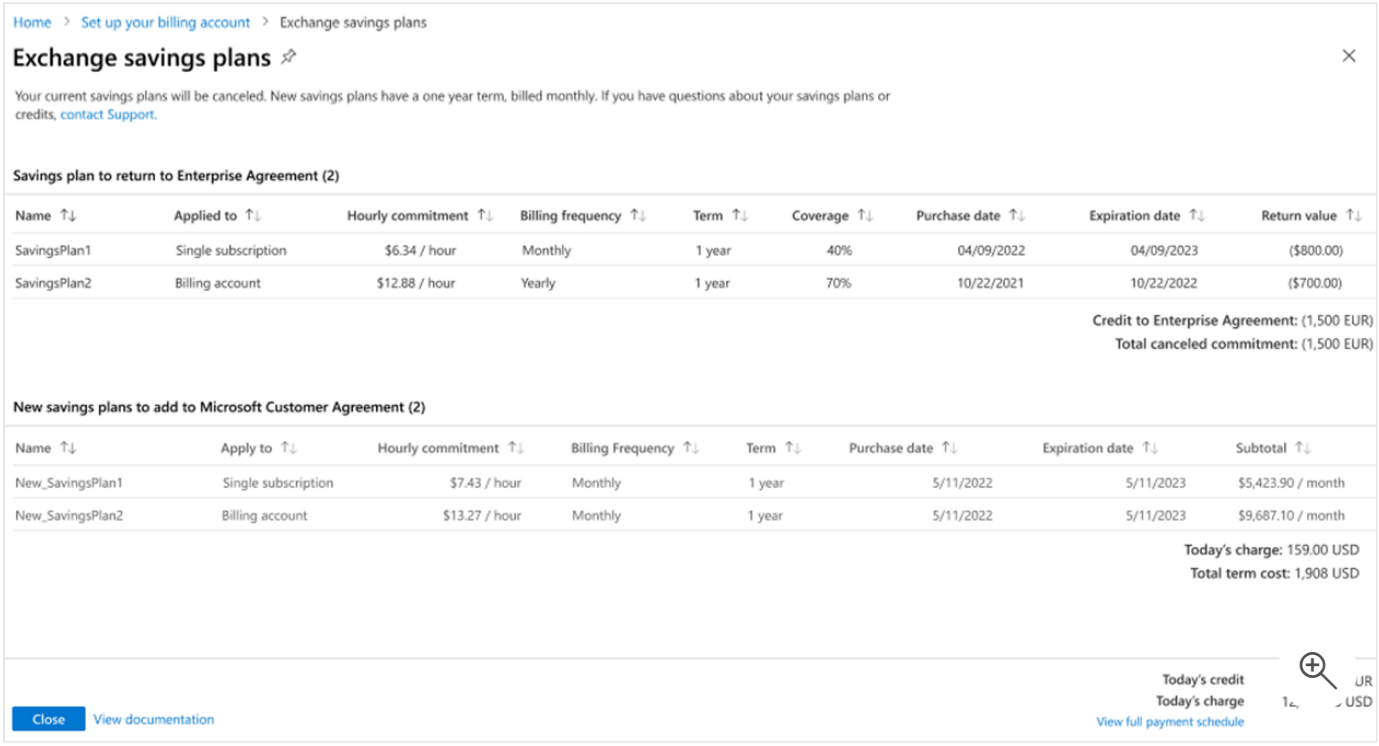

Savings Plan. Hourly commitment recommendations for the additional savings plan may take up to 2 days to appear in the Azure portal.

- Customers with 3-year savings plans, who want to retain their discount levels should immediately contact Azure support for assistance purchasing the new 3-year Savings Plans in the destination enrollment.

To move forward, select **View charges** to open the Exchange savings plans page and view the savings plans that must be repurchased.

The Exchange savings plans page shows you the savings plans that get canceled and credit that is returned in the original currency to the source enrollment. It also shows the new savings plans that get charged in USD for a one-year term for the target billing account. The new offer is a one-year term and matches the previous savings plan commitment per hour.

Here's an example showing the exchange. Monetary values are examples.

Close the Exchange savings plan page and then select the **I have viewed and agree to the charges for my new savings plans and understand they my current savings plans will be canceled and refunded to my original payment method** prompt to agree and continue.

Azure Marketplace products

When you transfer a subscription from an Enterprise Agreement to a Microsoft Customer Agreement, Marketplace purchases transfer with it when the following conditions are met:

- The Marketplace purchase in the EA subscription must be active.

- The Marketplace purchase must pass all eligibility checks before transfer. For example, the purchase must be available for use in the target agreement.
  - Marketplace private offer purchased under EA in Netherland cannot be transferred to the MCA-E billing account in US, as the eligibility check fails for this scenario.
- All other assets in the source subscription must also be able to successfully be transferred. Otherwise, the transfer fails.
- Marketplace purchased through Microsoft AppSource isn't associated with any subscription, and can't be transferred with this method.

Software as a service (SaaS) products are an exception. A SaaS subscription is billed through the Azure subscription but doesn't move with it, so you transfer SaaS billing ownership separately. For more information, see Software as a Service (SaaS) transfer.

Support plan

Support benefits don't transfer as part of the transition. Purchase a new support plan to get benefits for Azure subscriptions in your new billing account.

Past charges and balance

Charges and credits balance before the transition can be viewed in your Enterprise Agreement enrollment through the Azure portal.

When should the setup get completed?

Complete the setup of your billing account before your Enterprise Agreement enrollment expires. If your enrollment expires, services in your Azure subscriptions continue to run without disruption. However, you're charged pay-as-you-go rates for the services.

Changes to the Enterprise Agreement enrollment after the setup

Azure subscriptions that are created for the Enterprise Agreement enrollment after the transition can be manually moved to the new billing account. For more information, see get billing ownership of Azure subscriptions from other users. To move Azure reservations or savings plans that are purchased after the transition, contact Azure Support . You can also provide users access to the billing account after the transition. For more information, see manage billing roles in the Azure portal.

Revert the transition

The transition can't be reverted. Once the billing of your Azure subscriptions is transitioned to the new billing account, you can't revert it back to your Enterprise Agreement enrollment.

Closing your browser during setup

Before you select **Start transition**, you can close the browser. You can come back to the setup using the link you got in the email and start the transition. If you close the browser, after the transition is started, your transition will keep on running. To monitor the latest status of your transition, return to the transition status page. You get an email when the transition is completed.

Complete the setup in the Azure portal

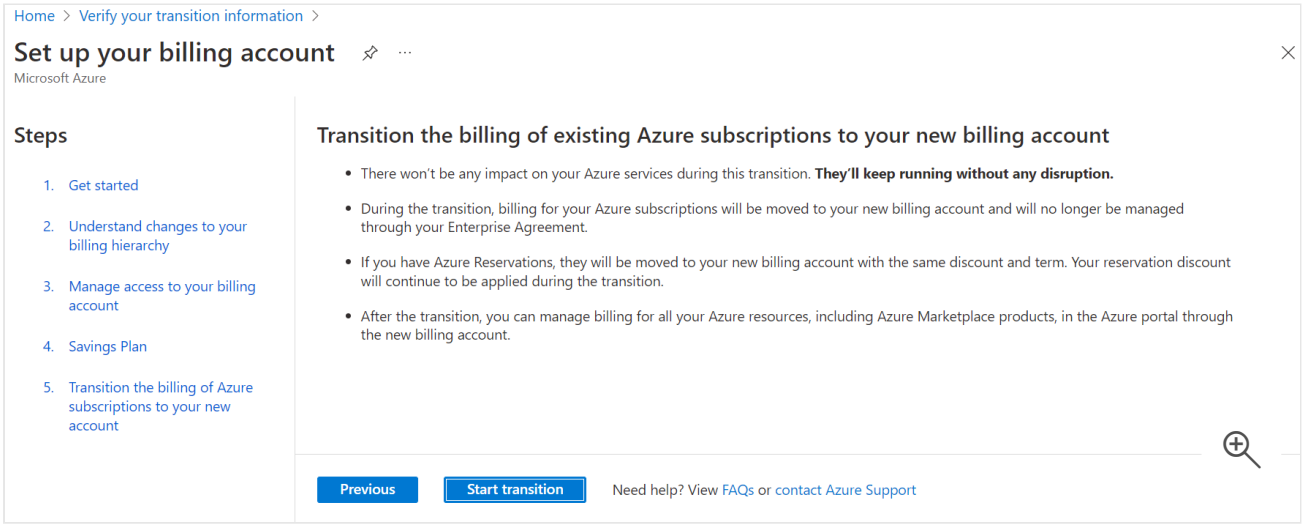

To complete the setup, you need access to both the new billing account and the Enterprise Agreement enrollment. For more information, see access required to complete the set up of your billing account.

1. Sign in to the Azure portal using the link in the email that was sent to you when you signed the Microsoft Customer Agreement.

2. If you don't have the email, sign in using the following link.

   ```
   https://portal.azure.com/#blade/Microsoft_Azure_SubscriptionManagement/TransitionEnrollment
   ```

3. Select **Start transition** in the last step of the setup. Once you select start transition:

   - A billing hierarchy corresponding to your Enterprise Agreement hierarchy is created in the new billing account. For more information, see understand changes to your billing hierarchy.
   - Administrators from your Enterprise Agreement enrollment are given access to the new billing account so that they continue to manage billing for your organization.

- The billing of your Azure subscriptions is transitioned to the new account. **There won't be any impact on your Azure services during this transition. They'll keep running without any disruption**.
- If you have Azure reservations or savings plans, they're moved to your new billing account with no change to benefits or term. If you have savings plans under the Enterprise Agreement purchased in non-USD currency, then the savings plans are canceled. They're repurchased under the terms of the new Microsoft Customer Agreement in USD.

4. You can monitor the status of the transition on the **Transition status** page. Canceled savings plans are shown in the Transition details.

   - If you had a savings plan that was repurchased, select the **new savings plan** link to view its details and to verify that it was created successfully.

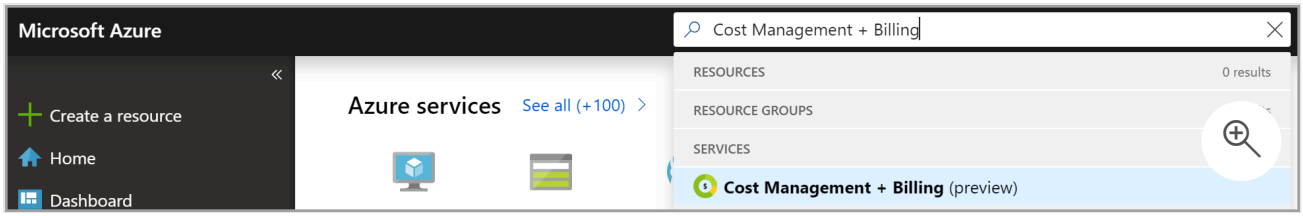

Validate billing account setup

Validate the following to ensure your new billing account is set up properly:

Azure subscriptions

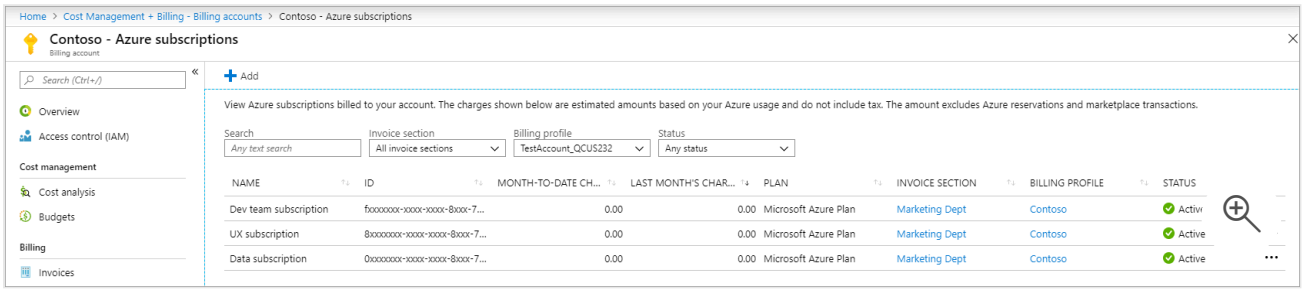

1. Sign in to the Azure portal .

2. Search for **Cost Management + Billing**.

3. Select the billing account. The billing account type is **Microsoft Customer Agreement**.

4. Select **Azure subscriptions** from the left side.

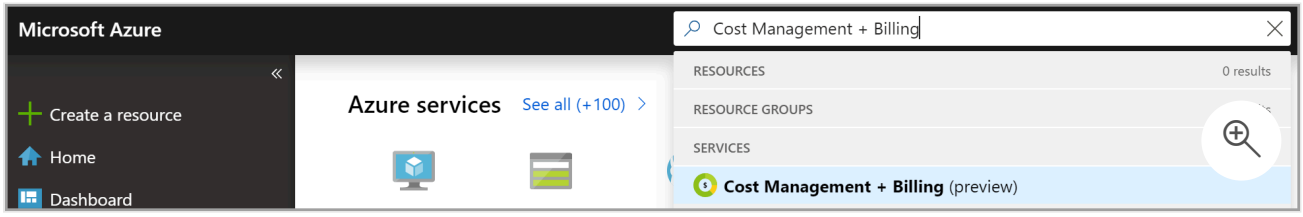

Azure subscriptions that are transitioned from your Enterprise Agreement enrollment to the new billing account are displayed on the Azure subscriptions page. If you believe any subscription is missing, transition the billing of the subscription manually in the Azure portal. For more information, see get billing ownership of Azure subscriptions from other users.

Access of enterprise administrators on the billing account

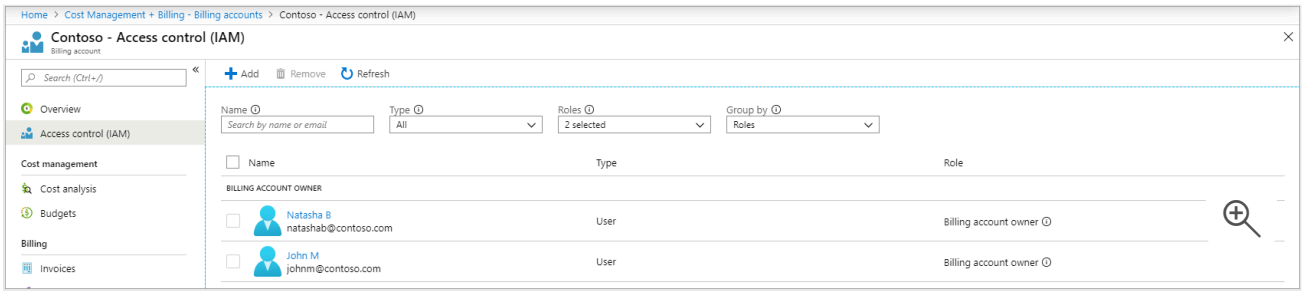

1. Sign in to the Azure portal .

2. Search for **Cost Management + Billing**.

3. Select the billing account for your **Microsoft Customer Agreement**.

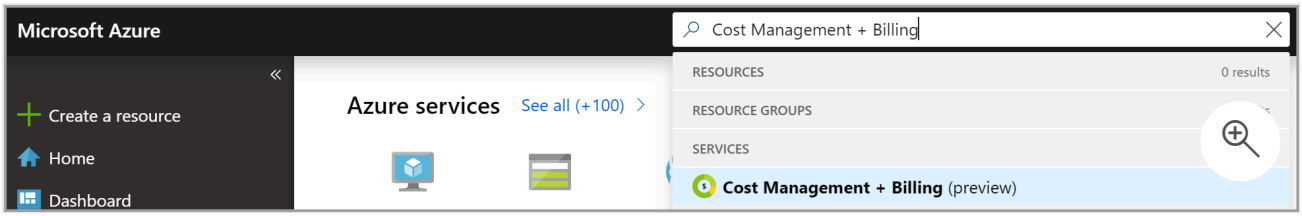

4. Select **Access control (IAM)** from the left side.

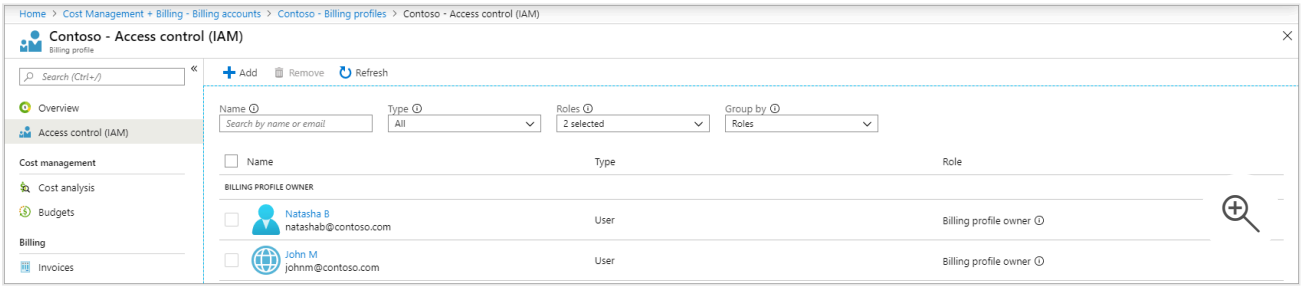

Enterprise administrators are listed as billing account owners while the enterprise administrators with read-only permissions are listed as billing account readers. If you believe the access for any enterprise administrators is missing, you can give them access in the Azure portal. For more information, see manage billing roles in the Azure portal.

Access of enterprise administrators on the billing profile

1. Sign in to the Azure portal .
2. Search for **Cost Management + Billing**.

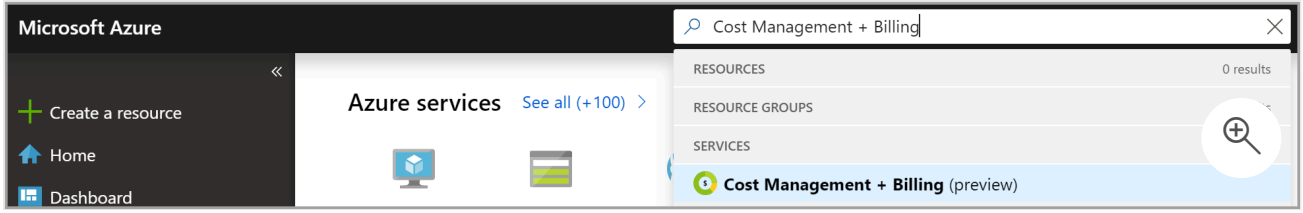

3. Select the billing profile created for your enrollment. Depending on your access, you might need to select a billing account. From the billing account, select Billing profiles and then the billing profile.
4. Select **Access control (IAM)** from the left side.

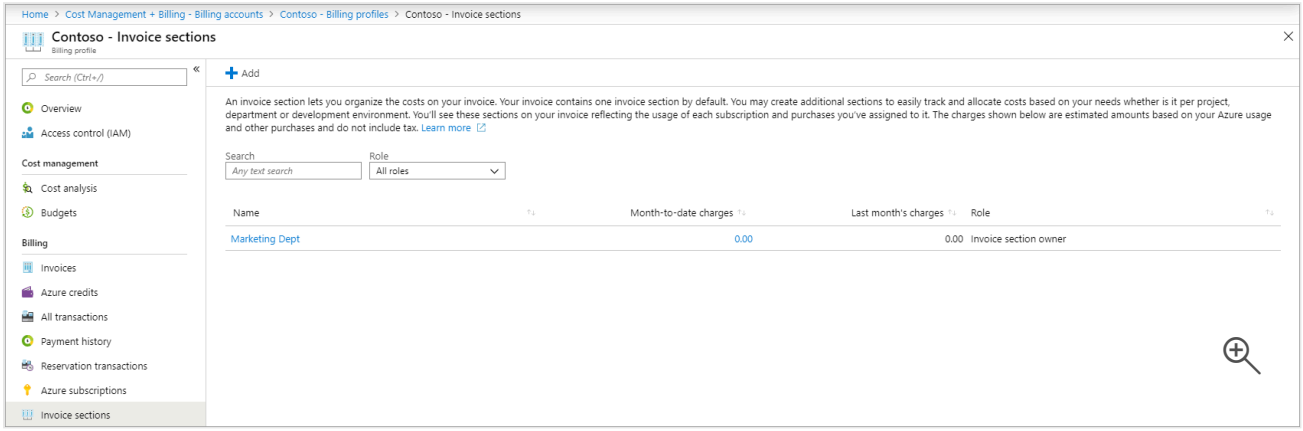

Enterprise administrators are listed as billing profile owners while the enterprise administrators with read-only permissions are listed as billing profile readers. If you believe the access for any enterprise administrators is missing, you can give them access in the Azure portal. For more information, see manage billing roles in the Azure portal.

Access of enterprise administrators, department administrators, and account owners on invoice sections

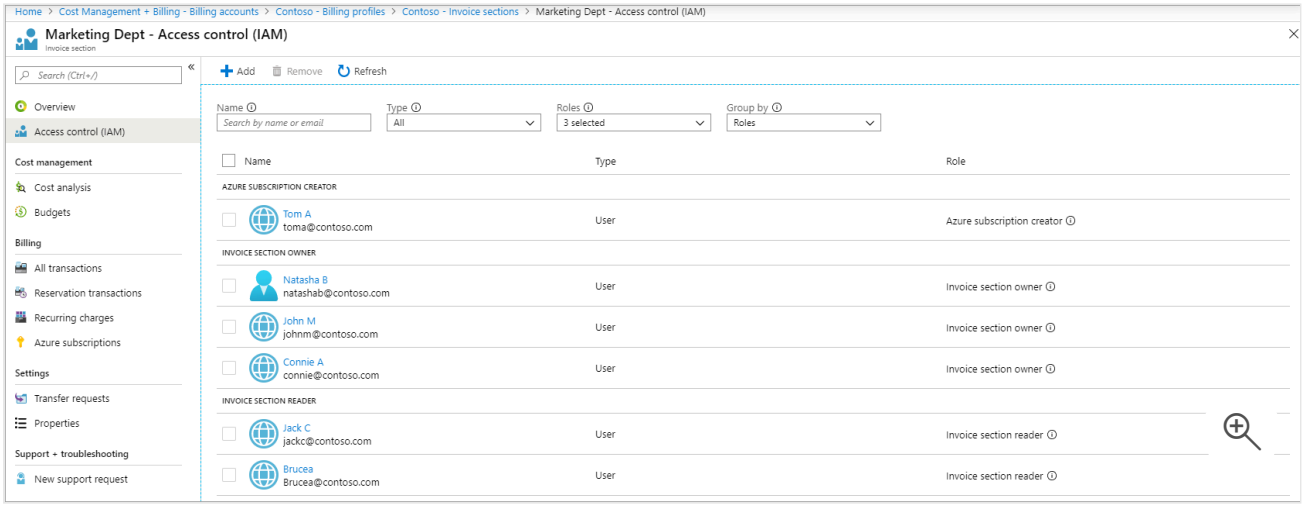

1. Sign in to the Azure portal .
2. Search for **Cost Management + Billing**.

3. Select an invoice section. Invoice sections have the same name as their respective departments in Enterprise Agreement enrollments. Depending on your access, you might need to select a billing account. From the billing account, select **Billing profiles** and then select **Invoice sections**. From the invoice sections list, select an invoice section.

4. Select **Access control (IAM)** from the left side.

Enterprise administrators and department administrators are listed as invoice section owners or invoice section readers while account owners in the department are listed as Azure subscription creators. Repeat the step for all invoice sections to check access for all departments in your Enterprise Agreement enrollment. Account owners that weren't part of any department get permission on an invoice section named **Default invoice section**. If you believe the access for any administrators is missing, you can give them access in the Azure portal. For more information, see manage billing roles in the Azure portal.

Changes after migration

- **MCA remit-to information differs** - The MCA remit-to information differs from the EA remit-to information. Your accounts payable need to create two records: one for EA invoices and another for MCA invoices. For more information about MCA payment details, see Bank details used to send wire transfer payments
- **Custom or shared views under Cost Management** - Custom views and shared views aren't migrated to the MCA. You need to recreate them in the new scope.
- **Budgets** - You need to recreate them.
- **Azure usage file enhancement** - The MCA Azure usage file has more columns and slight changes in naming conventions compared to the EA file. For more information, see:
  - Changes from Azure EA usage and charges
  - List of fields and descriptions
- **Power BI integration** - The billing parameters for MCA differ from EA. When using the Azure Cost Management connector in Power BI, you need to choose `Billing Profile ID` instead of the enrollment number in the `Scope` list. Then enter the 14-character Billing profile ID. For more information, see:
  - Connect to Cost Management data in Power BI Desktop.
  - Tutorial: Shape and combine data in Power BI Desktop
- Changes to **subscription vending using Terraform** - For more information, see:
  - Azure/lz-vending/azurerm | Terraform Registry
  - Subscription vending
  - Azure Landing Zones Subscription Vending with Terraform, Terraform Cloud, and GitHub
- **Cost Management** using third-party providers like Cloud health and Cloud easier - Organizations transitioning to MCA need to update their provider that they're transitioning to MCA. Most of them have a documented process to pull the MCA cost data.
- Historical data – It isn't available to account owners or users with the Subscription owner Azure role-based access control (RBAC) role after migration. Access for existing users, groups, or service principals that was assigned using Azure role-based access control (Azure RBAC) isn't affected during the transition.
  - Cost data transition - Cost data before the transition remains in the EA scope. It doesn't move to the MCA scope. You can access the data by switching scopes.
- **Reservations** - When there's a currency change during or after an enrollment transfer, reservations paid for monthly are canceled for the source enrollment. Cancellation happens at the time of the next monthly payment for an individual reservation. The cancellation is intentional and only affects monthly reservation purchases. You can repurchase them after migration. **Reservations cancellations triggered by this migration do not count toward the cancellation threshold of USD 50,000 within a rolling 12-month window**. For the cancellation policy, please refer to Self-service exchanges and refunds for Azure Reservations
- Reserved Instance (RI) charges may appear under the primary invoice section. To ensure accurate billing, customers should verify the placement of RI charges immediately. If

adjustments are needed, submit a transfer request to update the invoice section.

- **Savings Plans** - If they were purchased in a non-USD currency, they get canceled during migration. You can repurchase them after migration.
- **API changes** - API endpoints differ between EA and MCA. Existing EA API calls don't work with MCA. You need to use Microsoft Cost Management APIs instead if using consumption APIs. For more information, see:
  - Migrate EA to Microsoft Customer Agreement APIs
  - Azure Billing REST API
- **EA API keys** - Azure Enterprise Reporting APIs are retired aren't available on MCA. Instead, you use Microsoft Cost Management APIs. For more information, see Migrate from Azure Enterprise Reporting to Microsoft Cost Management APIs overview.
- **Automatic purchases** - If used under your old EA enrollment, you need to set them up under your new Microsoft Customer Agreement.
- **Management groups** – Subscriptions in management groups under a Microsoft Customer Agreement aren't supported in Cost Management yet. Cost Management + Billing is managed with APIs, automation scripts and Azure portal functionality. For more information, see Azure RBAC scopes.
  - **Cost Views**: Rebuild dashboards and reports using the Billing Profile ID or Invoice Sections ID instead of Management Group scope.
  - **APIs**: Update endpoints to align with MCA's billing structure.
  - **Automation**: Modify scripts that rely on Management Group-level scoping.
- **Export jobs** from Enterprise Agreement (EA) do not automatically migrate to Microsoft Customer Agreement (MCA). You must manually recreate export jobs under the MCA billing scope.
  - Reconfigure the Export API using Azure Commerce Toolbox or PowerShell scripts to recreate export jobs with MCA-compatible APIs.
  - Confirm that your MCA billing scope aligns with the MCA framework. For more details, refer to Understand and work with scopes.
  - To learn more about Exports data types and supported scopes, refer to the Understand export data types section in this article.
- **Tax exemption certificates** - If your EA account has a tax exemption certificate, you need to create an Azure support request to have a support representative associate your existing tax exempt certificate to your new Microsoft Customer Agreement account. Create a support request in the Azure portal .
- **Emissions Impact Dashboard** - You must update Billing Account ID as a Billing Account Administrator with a role as Billing Account Reader/Contributor/Owner. Learn more about it here: Connect to the Emissions Impact Dashboard for Azure - Power BI

Here are some points to consider after migration.

Expand table

Consideration	EA	MCA	Notes
Agreement duration	Expires and gets a new enrollment number at renewal	Doesn't expire	Billing profile IDs never change
Power BI Cost Management connector	Available	Available	The scope differs. There are more attributes in MCA. You can create a combined view using common elements.
API	OAuth authentication using an API key	OAuth2 authentication using service principal	More attributes are available in MCA. Common data elements can get used to combine data sets for continuity.
Invoicing	One invoice per enrollment number	Can be configured to receive more than one invoice for the same MCA by adding billing profiles	

Expand table

Consideration	EA	MCA
Billing roles	- Enterprise Admin - Department Admin - Account owner - Service Admin - Notification contact	- Owner - Contributor - Reader for Billing Account - Billing profile - Invoice Section - Invoice manager (for billing profile) - Subscription creator (for invoice section)
Multi-tenancy	- Multiple enrollments. - Sharing Microsoft Azure Consumption Commitment (MACC) benefit and Azure Consumption Discount (ACD) across multiple enrollments is complex.	- A single MCA supports multiple tenants. - Associate multiple tenants to a billing account in the primary tenant. - Provides access to MCA for users in associated tenants without guesting users into the primary tenant. - MACC and ACD can be shared.
Historical charges	Cost data stays under your EA enrollment billing scope.	MCA scope shows cost data starting from the migration date.
EA accounts	They're supported by your EA.	- Not supported in MCA. - The account's subscriptions belong to the invoice section created for their respective departments.

Consideration	EA	MCA
		- Account owners become Azure subscription creators. They can create and manage subscriptions for their invoice sections.
Marketplace	Marketplace offers can be purchased with an EA	- Marketplace offers can be purchased with an MCA. - Invoices can be configured to show Marketplace purchases on the same invoice with Azure or on a separate invoice.

For more information, see the following articles:

- Cost Management + Billing documentation
- Azure Product Transfer Hub
- Migrate from EA to MCA APIs
- Migrate from an EA to an MCA
